

Why Microfilm?

For branch operations, microfilming the day's deposit is a time consuming and expensive process. It is, however, a necessary form of **risk management** in the event that something happens to the days deposit on its way from the branch to central processing. With microfilm, you have the images of the checks with which to reconstruct the deposit, thus reducing potential losses.

The time necessary to microfilm the deposit and worse, the expense to maintain the equipment and develop the film has caused many financial institutions to eliminate branch microfilming altogether. The risk in this practice becomes evident when something happens to the deposit. In order to reconstruct the deposit without the film, the institution must rely on information gathered from the depositors. Losses are all but guaranteed and the institution's reputation suffers tremendously.

Why RemEx ICAR?

RemEx ICAR exploits the concept of branch microfilming by providing a cost effective and feature rich alternative. With RemEx ICAR, the branch images and stores not only the checks, but the MICR code line. This data is archived for permanent storage. In the event of a loss of deposit, RemEx ICAR can print IRD's (Image Replacement Documents) for any batch, almost instantly via a MICR laser printer.

Professional Data Exchange, Inc. dba PDEUSA, INC. has been providing state-of-the-art software and hardware technology, and processing services to the financial community for over 10 years. We are dedicated to providing new and innovative software and hardware solutions while maintaining the highest level of customer service. We pride ourselves in meeting and exceeding the current and future demands of our diverse client base.

RemEx (Remittance Express) Software with VIPS, Walther Italia, and Kodak document processing systems has proven to be a terrific processing combination. From low volume non-encoding environments to wholesale / retail processing exceeding 300,000 transactions per month, the RemEx IV System is the answer.

Professional Data Exchange, Inc. currently has sales offices in Phoenix AZ and San Marcos (San Diego) CA, and will be opening offices soon in Orange CA, and North Carolina. Our full service wholesale and retail lockbox is located in San Marcos CA.

RemEx ICAR Risk Management Tool

Simply stated, RemEx ICAR is a Risk Management Tool that improves loss prevention and cost control relating to the capture of daily deposits at the branch level. This tool provides the security of image capture with the added advantage of being able to print MICR coded Image Replacement Documents, (IRDs) containing both front and back images of any or all items lost in transit, with a few clicks of the mouse.

Never again will branches have to print endless microfilm copies of checks to try to reproduce a lost deposit. Now with RemEx ICAR, it takes only minutes, ensuring costs are minimized and losses are eliminated.

RemEx ICAR takes only seconds to image a teller's work as they leave on break. At the end of the day you can print reports by batch and by operator that provide all scanning details. Built in ID and password security ensures only authorized personnel have access to the management level options.

Flexibility RemEx ICAR is designed with the operator in mind. Controls are intuitive so training is minimal. Items scanned can be reprinted in report form with the front and rear of the document presented on the front of the same page. This is handy for bank customers who are looking for copies of their deposited checks.

Risk Management / Loss Prevention Now if a deposit is lost, it can be recreated without concerning depositors. IRD's with full MICR encoding can be printed from the active database or archived records in minutes, ensuring the integrity of branch security. Insurance bonds generally cover losses of this nature, but the loss of confidence is expensive and difficult to measure and is rarely if ever compensated for in a loss recovery claim.

RemEx ICAR is never having to tell a depositor, "We lost your deposit and we need you to tell us what items you deposited".

The cost to purchase the system is comparable to the cost of a micro-filmer, but without the recurring cost of film and maintenance and with the added

"restore" loss prevention capabilities. Call today for a demo of RemEx ICAR. Our staff would be happy to arrange a demonstration at your location, or provide you with a demo CD which allows you to see the many features and benefits of RemEx ICAR.

Cost Efficient RemEx ICAR System costs about the same to buy as a micro-filmer, but with ICAR you don't have the recurring cost of film and developing, and you have the added advantage of being able to recreate a deposit in minutes! One loss could easily be more than the cost of installing the entire system at the branch level.

Service RemEx ICAR Systems are installed with depot service on the scanner unit and a variety of options for PC and software support depending on the internal capabilities of the Institution.

Support PDEUSA offers telephone hardware and software support M-F from 9am to 4pm PST. On-site service is available via contract or hourly.
